In-Demand AI Skills Pack

The 8 AI skills people pay to learn — and the fastest way to start each.

The AI skills people are paying to learn right now — what each one is, why it pays, and the fastest way to start. Pick one, get good enough to sell it, then add the next.

How to use this pack

You don't need all of these. Pick the ONE that fits your lane, do its 'first practice task,' and you'll be more capable than most people selling these services today. Come back for the next skill when you're ready to expand.

1. Prompt engineering

What it is: getting reliable, high-quality output from AI by writing clear, structured instructions.

Why it pays: it's the foundation of every other skill — and businesses pay for prompt libraries and setups that just work.

→ **First task:** rewrite a vague prompt into role + task + format + example. Compare the results.

2. AI content creation

What it is: using AI to produce posts, scripts, emails, and articles that sound human and convert.

Why it pays: every brand needs endless content and hates writing it.

→ **First task:** turn one idea into a TikTok script, an email, and a carousel — keeping one consistent message.

3. AI automation (no-code)

What it is: connecting apps with tools like n8n, Make, or Zapier so tasks run themselves.

Why it pays: you sell businesses back their time — one automation can be worth hundreds a month.

→ **First task:** build a flow that emails you whenever a form is filled in.

4. Building AI agents & 'employees'

What it is: assembling AI that performs a role — a research agent, a support agent, a content agent.

Why it pays: 'AI employees' are the hottest product category; people buy ready-made ones.

→ **First task:** write a one-paragraph role prompt for a 'research assistant' and test it on a real question.

5. AI image & design

What it is: generating on-brand covers, mockups, thumbnails, and ads with AI image tools.

Why it pays: good visuals sell products and content; most beginners have none.

→ **First task:** generate three product-cover options in one consistent style.

6. SEO & AEO (getting found by Google and AI)

What it is: structuring content so search engines rank it and AI assistants quote it.

Why it pays: free, compounding traffic is the cheapest customer acquisition there is.

→ **First task:** write one page that answers a real question as a clean Q&A; with an FAQ section.

7. AI video

What it is: creating short-form and faceless video with AI voice, clips, and captions.

Why it pays: video is the #1 way to grow an audience fast.

→ **First task:** script and storyboard one 30-second faceless video.

8. Selling & offers

What it is: packaging value into an irresistible offer and writing copy that converts.

Why it pays: the best product with a weak offer makes nothing; this multiplies everything else.

→ **First task:** write a price ladder — free lead magnet, \$9, \$27, \$47 bundle — for your niche.

Where to go next

Learn by shipping. Pick a skill, do the task, then sell a small product built on it. Income HQ's store gives you done-for-you templates for each of these so you can deliver before you're an expert — the Anti-PLR way.
